

**Appendix: Benzodiazepines and opioids and risk of hospitalization and mortality with additional adjustment for hospitalized time before study start [posted as supplied by author]**

	<b>Hospitalization, adjusted SHR (95% CI)</b>	<b>Mortality, adjusted HR (95% CI)</b>
<b>Benzodiazepines</b>		
Low dose	1.02 (0.87 – 1.20)	1.18 (0.99 – 1.41)
High dose	0.97 (0.82 – 1.14)	1.25 (1.04 – 1.50)
<b>Opioids</b>		
Low dose	0.97 (0.81 – 1.16)	1.00 (0.81 – 1.22)
High dose	1.04 (0.89 – 1.22)	1.20 (1.02 – 1.43)

The main hospitalization and mortality models adjusted and stratified, respectively, for amount (quartiles) of hospitalized time during 91 days before study start.

*Abbreviations:* CI, confidence interval; HR, hazard ratio; SHR, sub-distribution hazard ratio.
